Radio Station Installs Auxiliary Transmitter At Men's Residence

An organizational meeting was held in the Clarkson Physics Building on Monday evening.

Ninety-seven students attended the meeting. Talks were delivered by the various department heads and those present signed up to work in the department of their choice.

Broadcasting activities for the new semester will commence next Monday at 7 p. m. A complete program schedule will appear in a future Integrator issue.

Campus station WNTC will provide extended coverage for both village and student listeners with the installation of auxiliary transmitters at the Clarkson Men's Residence and the Pierrepont Dormitories. The transmitter at the Men's Residence was installed during the past week and will be in operation when the station takes to the air. The Pierrepont transmitter is under construction.

Besides its regular format of disc jockey shows, the station will, this year, carry a series of live dramatic programs with student actors and actresses. All home athletic events, including soccer, and many road games will be broadcast.

The station is a carrier current type station and operates on a frequency of 640 kc.
